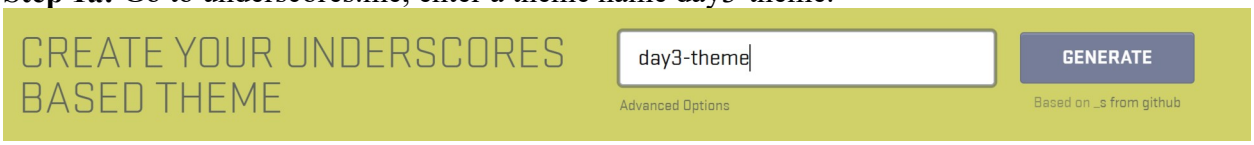
WordPress Day 3 – Assignment – Sandhya Shiwakoti

This assignment uses a fresh Underscores theme. The code is organized into separate files inside an inc/ folder rather than putting everything in functions.php.
The file structure we will create is:

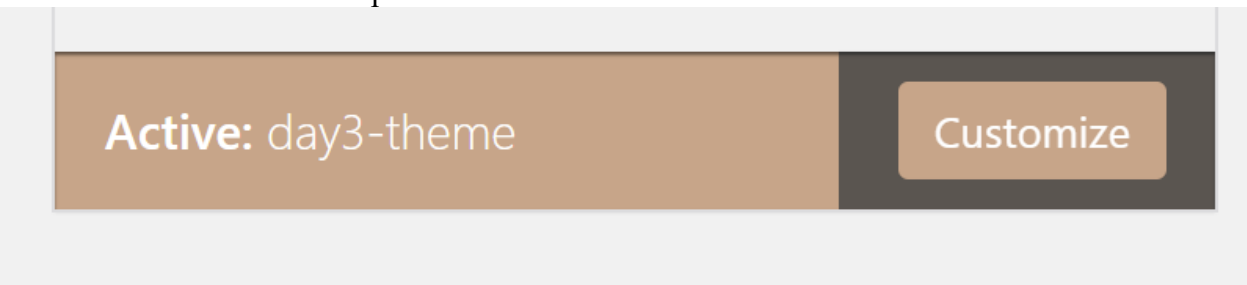
day3-theme/
- ***inc/***
  - cpt-team.php - Custom post type
  - taxonomy-department.php - Custom taxonomy
  - metabox-team.php - Metabox and custom fields
- ***assets/***
  - ***css/***
    - team.css - Custom styles
  - ***js/***
    - team.js - Tab functionality
- page-team.php - Page template
- functions.php - Includes all inc/ files + enqueues assets

Step 1: Get the Underscores Theme

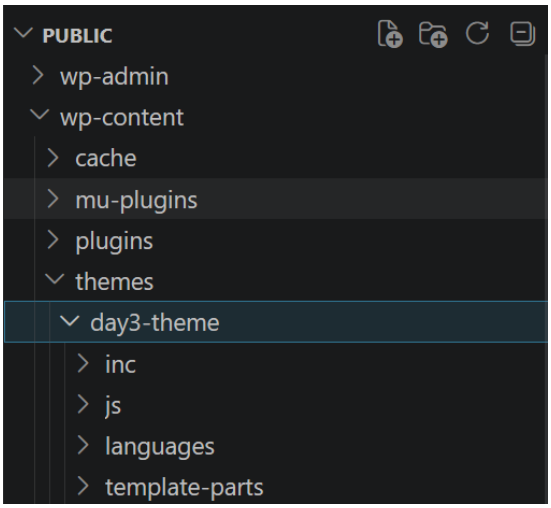
Step 1a: Go to underscores.me, enter a theme name day3-theme.



Step 1b: Go to WordPress dashboard → Appearance → Themes → Add New → Upload Theme → choose the downloaded zip → Install Now → Activate.



Step 1c: Open the theme folder in VS Code. The theme is located at app/public/wp-content/themes/day3-theme



Step 2: Create the inc/ Folder and Custom Post Type

Inside the inc/ folder, create a new file called cpt-team.php and add the following code:

wp-content > themes > day3-theme > inc > cpt-team.php > ...

```php
<?php
function outside_register_team_cpt() {
    $labels = array(
        'name'               => 'Team Members',
        'singular_name'      => 'Team Member',
        'menu_name'          => 'Team Members',
        'add_new'            => 'Add New Member',
        'add_new_item'       => 'Add New Team Member',
        'edit_item'          => 'Edit Team Member',
        'view_item'          => 'View Team Member',
        'all_items'          => 'All Team Members',
    );
    $args = array(
        'labels'             => $labels,
        'public'             => true,
        'show_in_menu'       => true,
        'menu_icon'          => 'dashicons-groups',
        'supports'           => array( 'title', 'editor', 'thumbnail' ),
        'rewrite'            => array( 'slug' => 'team' ),
        'has_archive'        => true,
    );
    register_post_type( 'team', $args );
}
add_action( 'init', 'outside_register_team_cpt' );
```

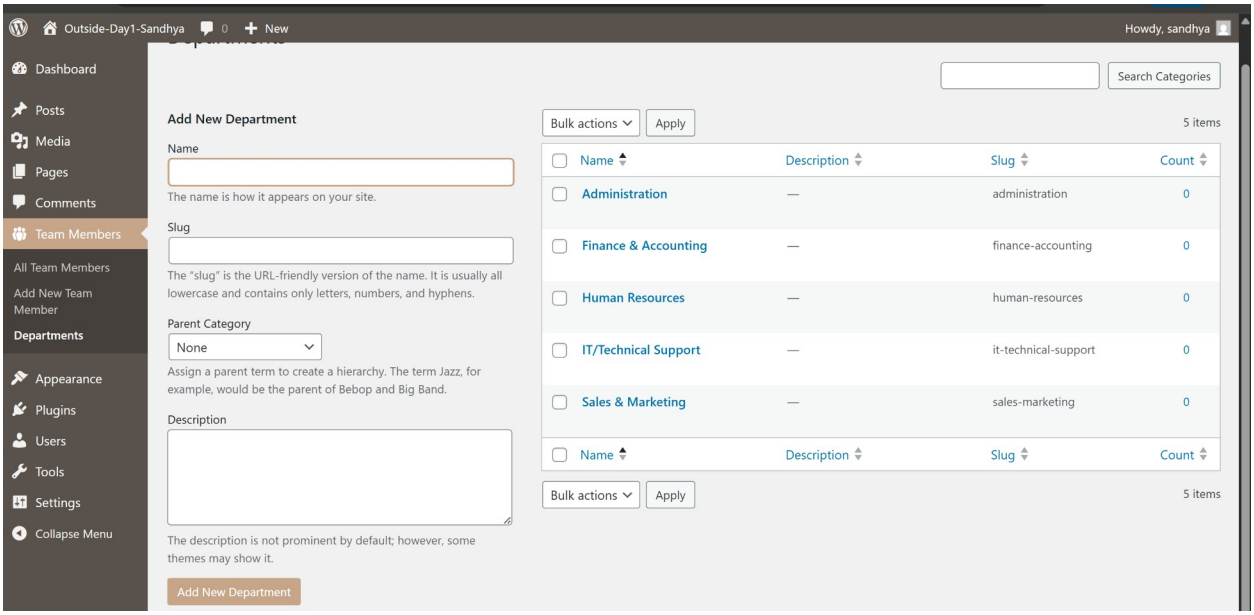
Step 3: Create the Custom Taxonomy - Department

Step 3a: Inside the inc/ folder, create a new file called taxonomy-department.php and add the following code:

wp-content > themes > day3-theme > inc > taxonomy-department.php > ...

```php
<?php
function outside_register_department_taxonomy() {
    $labels = array(
        'name'              => 'Departments',
        'singular_name'     => 'Department',
        'menu_name'         => 'Departments',
        'all_items'         => 'All Departments',
        'add_new_item'      => 'Add New Department',
        'edit_item'         => 'Edit Department',
    );
    $args = array(
        'hierarchical'      => true,
        'labels'            => $labels,
        'show_ui'           => true,
        'show_admin_column' => true,
        'rewrite'           => array( 'slug' => 'department' ),
    );
    register_taxonomy( 'department', array( 'team' ), $args );
}
add_action( 'init', 'outside_register_department_taxonomy' );
```

Step 3b: After saving, go to WordPress dashboard → Team Members → Departments. Add multiple departments.



Step 4: Create the Metabox and Custom Fields

Step 4a: Inside the inc/ folder, create a new file called metabox-team.php and add the following code:

wp-content > themes > day3-theme > inc > metabox-team.php > ...

```php
<?php
function outside_team_metabox() {
    add_meta_box(
        'team_details',
        'Team Member Details',
        'outside_team_metabox_callback',
        'team',
        'normal',
        'high'
    );
}
add_action( 'add_meta_boxes', 'outside_team_metabox' );

function outside_team_metabox_callback( $post ) {
    wp_nonce_field( 'outside_team_nonce_action', 'outside_team_nonce' );
    $position   = get_post_meta( $post->ID, '_team_position', true );
    $experience = get_post_meta( $post->ID, '_team_experience', true );
    $address    = get_post_meta( $post->ID, '_team_address', true );
    $contact    = get_post_meta( $post->ID, '_team_contact', true );
    ?>
    <table class='form-table'>
        <tr>
            <th><label for='team_position'>Position</label></th>
            <td><input type='text' id='team_position' name='team_position'
            value='<?php echo esc_attr( $position ); ?>' class='regular-text' /></td>
        </tr>
        <tr>
            <th><label for='team_experience'>Years of Experience</label></th>
            <td><input type='number' id='team_experience' name='team_experience'
            value='<?php echo esc_attr( $experience ); ?>' class='small-text' /></td>
        </tr>
        <tr>
            <th><label for='team_address'>Address</label></th>
            <td><textarea id='team_address' name='team_address'
            rows='3' class='regular-text'><?php echo esc_textarea( $address ); ?></textarea></td>
        </tr>
        <tr>
            <th><label for='team_contact'>Contact Number</label></th>
            <td><input type='text' id='team_contact' name='team_contact'
            value='<?php echo esc_attr( $contact ); ?>' class='regular-text' /></td>
        </tr>
    </table>
    <?php
}

function outside_team_save_meta( $post_id ) {
    if ( ! isset( $_POST['outside_team_nonce'] ) ) return;
    if ( ! wp_verify_nonce( $_POST['outside_team_nonce'], 'outside_team_nonce_action' ) ) return;
    if ( defined( 'DOING_AUTOSAVE' ) && DOING_AUTOSAVE ) return;
    if ( ! current_user_can( 'edit_post', $post_id ) ) return;

    $fields = array( 'team_position', 'team_experience', 'team_address', 'team_contact' );
    foreach ( $fields as $field ) {
        if ( isset( $_POST[ $field ] ) ) {
            update_post_meta( $post_id, '_' . $field,
            sanitize_text_field( $_POST[ $field ] ) );
        }
    }
}
add_action( 'save_post', 'outside_team_save_meta' );
```

Step 5: Update functions.php to Include All Files and Enqueue Assets

Step 5a: Open functions.php, add these require lines:

```
wp-content > themes > day3-theme > functions.php > ...

require get_template_directory() . '/inc/cpt-team.php';
require get_template_directory() . '/inc/taxonomy-department.php';
require get_template_directory() . '/inc/metabox-team.php';
```

Step 5b: Also add this function in functions.php to enqueue the custom CSS and JS files:

```php
function outside_enqueue_team_assets() {
    if ( is_page_template( 'page-team.php' ) ) {
        wp_enqueue_style(
            'outside-team-style',
            get_template_directory_uri() . '/assets/css/team.css',
            array(),
            '1.0.0'
        );
        wp_enqueue_script(
            'outside-team-script',
            get_template_directory_uri() . '/assets/js/team.js',
            array( 'jquery' ),
            '1.0.0',
            true
        );
    }
}
add_action( 'wp_enqueue_scripts', 'outside_enqueue_team_assets' );
```

Step 6: Create the CSS and JS Asset Files

Step 6a: Inside the theme folder, create these folders: assets/css/ and assets/js/

Step 6b: Inside assets/css/ create a file called team.css and team.js and add the following codes:

wp-content > themes > day3-theme > assets > css > # team.css

```css
.team-tabs {
  display: flex;
  flex-wrap: wrap;
  gap: 10px;
  margin-bottom: 30px;
  border-bottom: 2px solid #ddd;
  padding-bottom: 10px;
}
.team-tab-btn {
  padding: 10px 20px;
  background: #f0f0f0;
  border: 1px solid #ddd;
  cursor: pointer;
  border-radius: 4px;
  font-size: 14px;
  transition: all 0.3s;
}
.team-tab-btn.active {
  background: #0073aa;
  color: #fff;
  border-color: #0073aa;
}
.team-tab-content {
  display: none;
}
.team-tab-content.active {
  display: block;
}
.team-grid {
  display: grid;
  grid-template-columns: repeat(3, 1fr);
  gap: 20px;
  margin-top: 20px;
}
.team-card {
  background: #fff;
  border: 1px solid #ddd;
  border-radius: 8px;
  padding: 20px;
  text-align: center;
  box-shadow: 0 2px 4px rgba(0, 0, 0, 0.1);
}
.team-card img {
  width: 100px;
  height: 100px;
  border-radius: 50%;
  object-fit: cover;
  margin-bottom: 10px;
}
.team-card h3 {
  margin: 0 0 5px;
  font-size: 16px;
}
.team-card .position {
  color: #0073aa;
  font-weight: bold;
  font-size: 13px;
}
.team-card .meta {
  font-size: 12px;
  color: #666;
  margin-top: 5px;
}
```

wp-content > themes > day3-theme > assets > js > JS team.js > ...

```javascript
jQuery(document).ready(function ($) {
  // Show first tab by default
  $(".team-tab-btn").first().addClass("active");
  $(".team-tab-content").first().addClass("active");

  // On tab button click
  $(".team-tab-btn").on("click", function () {
    var target = $(this).data("target");

    // Remove active from all
    $(".team-tab-btn").removeClass("active");
    $(".team-tab-content").removeClass("active");

    // Add active to clicked
    $(this).addClass("active");
    $("#" + target).addClass("active");
  });
});
```

Step 7: Create the Page Template - page-team.php

In the root of the theme folder, create a new file called page-team.php and add the following code:

wp-content > themes > day3-theme > page-team.php

```php
<?php
/**
 * Template Name: Team Page
 */

get_header();

$departments = get_terms( array(
    'taxonomy'   => 'department',
    'hide_empty' => true,
) );

if ( ! empty( $departments ) && ! is_wp_error( $departments ) ) : ?>

    <div class='team-tabs'>
        <?php foreach ( $departments as $dept ) : ?>
            <button class='team-tab-btn' data-target='dept-<?php echo esc_attr( $dept->slug ); ?>'>
                <?php echo esc_html( $dept->name ); ?>
            </button>
        <?php endforeach; ?>
    </div>

    <?php foreach ( $departments as $dept ) : ?>
        <div class='team-tab-content' id='dept-<?php echo esc_attr( $dept->slug ); ?>'>
            <h2><?php echo esc_html( $dept->name ); ?></h2>

            <?php
            $team_query = new WP_Query( array(
                'post_type'      => 'team',
                'posts_per_page' => -1,
                'tax_query'      => array(
                    array(
                        'taxonomy' => 'department',
                        'field'    => 'slug',
                        'terms'    => $dept->slug,
                    ),
                ),
            ) );

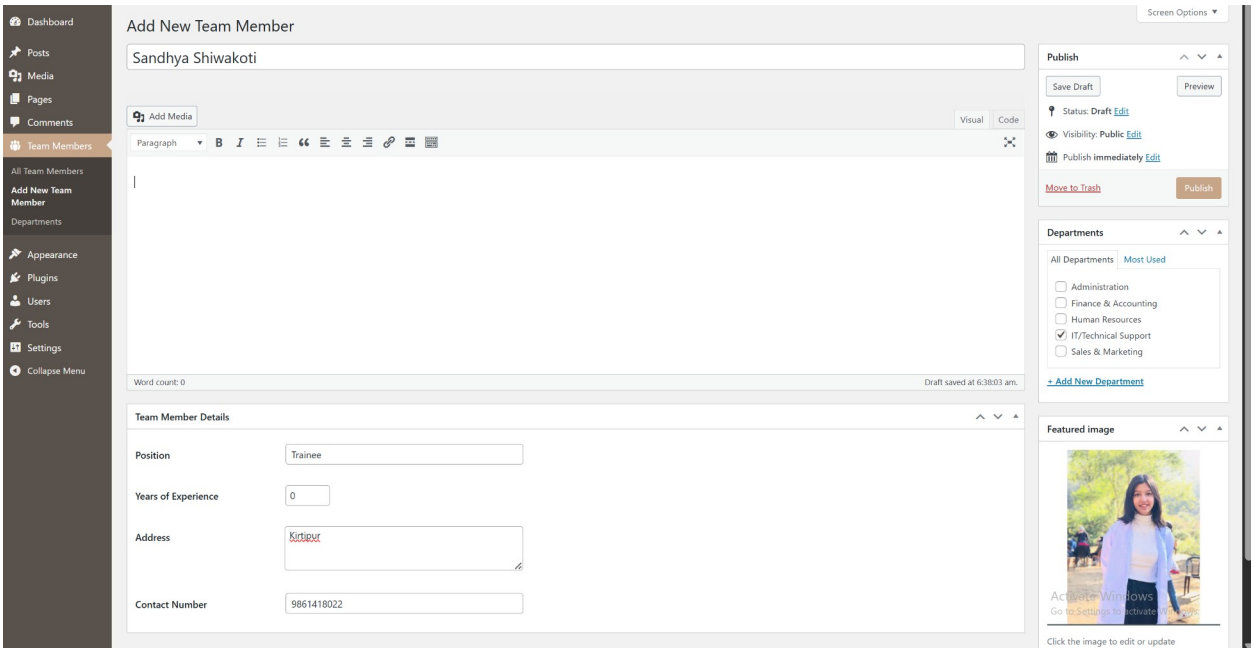
            if ( $team_query->have_posts() ) : ?>
                <div class='team-grid'>
                    <?php while ( $team_query->have_posts() ) : $team_query->the_post(); ?>
                        <div class='team-card'>
                            <?php if ( has_post_thumbnail() ) : ?>
                            <?php the_post_thumbnail( 'thumbnail' ); ?>
                            <?php else : ?>
                                <img src='<?php echo get_template_directory_uri(); ?>/assets/images/default-avatar.png' alt='Avatar' />
                            <?php endif; ?>
                            <div class='team-card-info'>
                                <h3><?php the_title(); ?></h3>
                                <p class='position'><?php echo esc_html( get_post_meta( get_the_ID(), '_team_position', true ) ); ?></p>
                                <div class='team-contact-icons'>
                                    <span></span>
                                    <span></span>
                                </div>
                            </div>
                        </div>
                    <?php endwhile; wp_reset_postdata(); ?>
                </div>
            <?php else : ?>
                <p>No team members found in this department.</p>
            <?php endif; ?>
        </div>
    <?php endforeach; ?>

<?php endif;

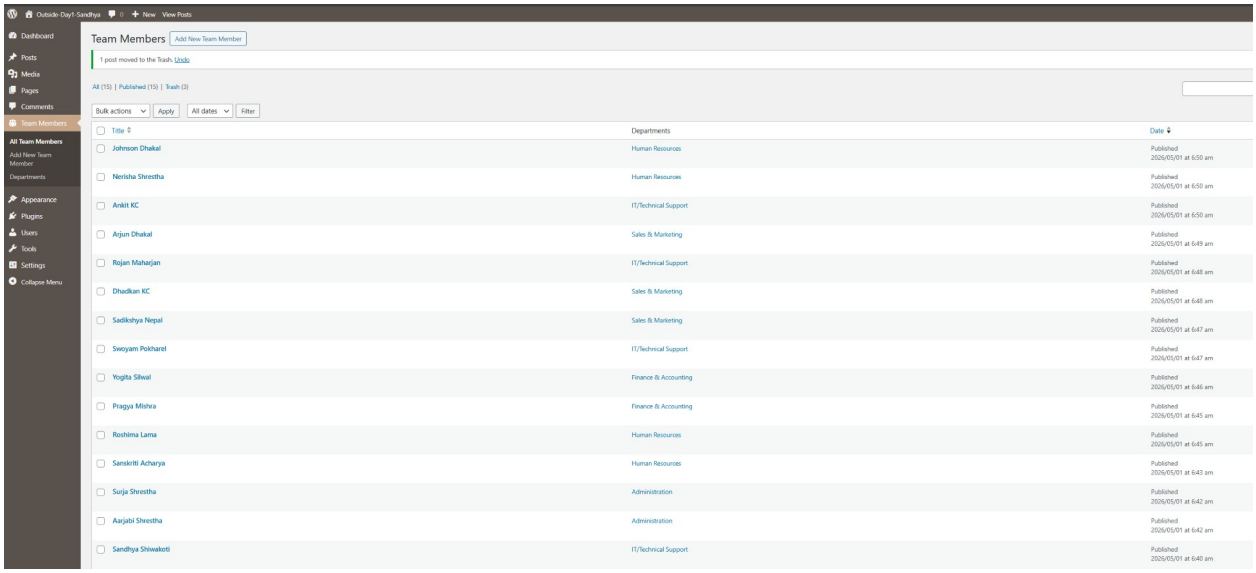
get_footer();
```

Step 8: Add Team Members

Step 8a: Go to WordPress dashboard → Team Members → Add New. For each team member fill in the form:

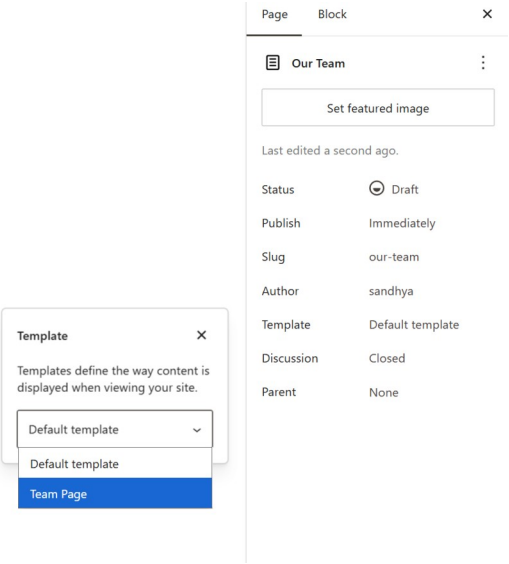


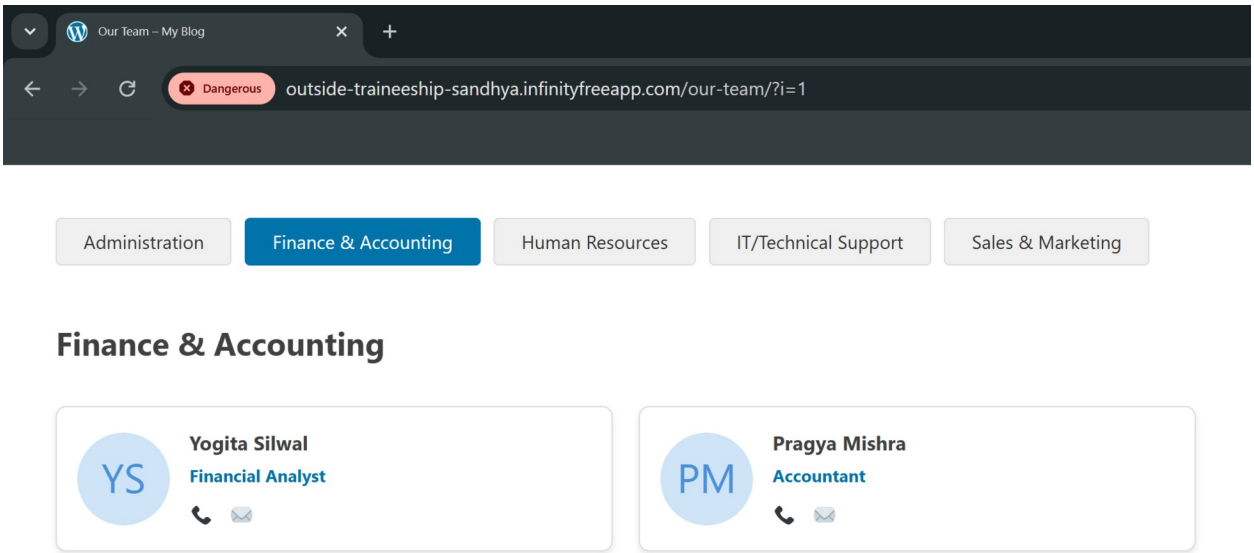
Add at least 15 team members spread across the different departments.



Step 9: Create the Team Page and Assign the Template

Step 9a: Go to WordPress dashboard → Pages → Add New, Title: Our Team.
Step 9c: In the right sidebar under Page Attributes, find the Template dropdown and select Team Page.





Step 9d: Click Publish. Then click View Page to see the team members displayed in tabs by department.
